### **DETAILED ACTION**

1. This action is in response to the action filed on 01/04/2010.
2. Applicant's arguments filed on 08/06/2009 have been fully considered and they are persuasive.
3. Claims 1-13 are allowable. The restriction requirement claims 5, and 7, as set forth in the Office action mailed on 12/02/2009, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claims 5, and 7, directed to power loss, and shared capabilities no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim 1.

### ***Allowable Subject Matter***

4. Claims 1-13 are allowed.

### ***Reasons for indicating Allowable Subject Matter***

5. The following is an examiner's statement of reasons for allowance. The prior art of record does not teach neither singly nor in combination the claimed limitations of "device for the adjustment of the bit rate of a stream of contents as a function of processing capabilities of at least one receiver, said processing capabilities being the resources of said at least one receiver fit for processing the data received, said contents being transmitted by a sender to said receiver via a network, according to a communication protocol providing for a return transmission of reception data of said contents by said receiver to said sender, said device comprising : a module for

Art Unit: 2455

inputting information relating to said capabilities, a module for estimating a required level for said bit rate at least as a function of said information, and a module for writing stream adjustment cues that is intended to write said adjustment cues for return transmission with said reception data to said sender, said adjustment cues being capable of bringing about a modification of said bit rate in relation to said required level, wherein said communication protocol providing for a return transmission to said sender of at least one parameter of the protocol normally targeted at conditions of communication of said contents in said network between said sender and said receiver, the writing module is intended to modify said parameter in such a way as to use it to transmit said adjustment cues.”

Specifically, the prior art fails to disclose “a module for writing stream adjustment cues that is intended to write said adjustment cues for return transmission with said reception data to said sender, said adjustment cues being capable of bringing about a modification of said bit rate in relation to said required level, wherein said communication protocol providing for a return transmission to said sender of at least one parameter of the protocol normally targeted at conditions of communication of said contents in said network between said sender and said receiver, the writing module is intended to modify said parameter in such a way as to use it to transmit said adjustment cues”

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee.

*Conclusion*

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See form 892.
